A; Accession: A46526

A; Status: not compared with conceptual translation

A; Molecule type: DNA

A; Reciences: Capacity of the CD11b are included in some but not all mature A; Note: the last three bases of intron 13, CAG, are included in some but not all mature A; Note: sequence extracted from NEBI backbone (NCBIP:121963)

A; Note: sequence extracted from NEBI backbone (NCBIP:121963)

B; Note: sequence extracted from NEBI backbone (NCBIP:121963)

granulocytes.
--- DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrins with I-domains do not undergo protease cleavage.
--- SIMILARITY: Belongs to the integrin alpha chain family.
--- SIMILARITY: Contains 7 FG-GAP repeats.
--- SIMILARITY: Contains 1 VWFA domain.
--- SIMILARITY: Contains 1 VWFA domain.

"Experimental support for a beta-propeller domain in integrin alpha-
subunits and a calcium binding site on its lower surface.";

Proc. Natl. Acad. Sci. U.S.A. 95:4870-4875(1998).

-!- FUNCTION: Integrin alpha-M/beta-2 is implicated in various
adhesive interactions of monocytes, macrophages and granulocytes
as well as in mediating the uptake of complement-coated particles.

It is identical with CR-3, the receptor for the ic3b fragment of
the third complement component. It probably recognizes the R-G-D
peptide in C3b. Integrin alpha-M/beta-2 is also a receptor for
fibrinogen, factor X and ICAM1. It recognizes Pl and P2 peptides
of fibrinogen gamma chain.

-!- SUBUNIT: Heterodimer of an alpha and a beta subunit. Alpha-M
                                                                                                                                                                                                                                                                                                                                 Lee J.O., Rieu P., Arnaout M.A., Liddington R.; "Crystal structure of the A domain from the alpha subunit of integrin CR3 (CD11b/CD18)."; Cell 80:631-638(1995).

SEQUENCE FROM N.A.
SETINALIAN D.M. Sr., Zerria K. Jr.;
Submitted (MAY-2000) to the EMBL/GenBank/DDBJ databases.
-!- SUBCELLULAR LOCATION: Type I membrane protein (By similarity).
-!- SIMILARITY: Belongs to the integrin alpha chain family.

DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrins bowlan: The integrin I-domains do not undergo protease cleavage.

SIMILARITY: Belongs to the integrin alpha chain family.

SIMILARITY: Contains 7 FG-ABP repeats.

SIMILARITY: Contains NWFA domain.

It recognizes the sequence G-P-R in fibrinogen. It mediates cell-cell interaction during inflammatory responses. It is especially important in monocyte adhesion and chemotaxis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SEQUENCE OF 20-43.

The leukocyte integrin alpha D beta 2 binds VCAM-1: evidence for a
thinding interface between I domain and VCAM-1:,
J. Immunol. 163:1984-1990(1999)
C. I FUNCTION: Integrin alpha-D/beta-2 is a receptor for ICAM3 and
VCAM1. May play a role in the atherosolerotic process such as
clearing lipoproteins from plaques and in phagocytosis of blood-
borne pathogens, particulate matter, and senescent erythrocytes
clearing lipoproteins from plaques and in phagocytosis of blood-
borne pathogens, particulate matter, and senescent erythrocytes
clearing lipoproteins from plaques and a beta subunit. Alpha-D
associates with beta-2.
C. SUBURIT: Heterodimer of an alpha and a beta subunit. Alpha-D
associates with beta-2.
C. SUBCELLUIAR LOCATION: Type I membrane protein.
C. SUBCELLUIAR LOCATION: Type I membrane protein.
C. SUBCELLUIAR LOCATION: Type I membrane protein.
C. SUBCELLUIAR Location of palaques, and on splenic red pulp macrophages.
C. DOWAIN: The integrin I-domain (insert) is a VWFA domain. Integrins
C. SIMILARITY: Contains 7 FG-GAP repeats.
C. SIMILARITY: Contains 1 VWFA domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This SWISS-PROT entry is copyright.                                               VCAMI. May play a role in the atherosclerotic process such as clearing lipoproteins from plaques and in phagosytosis of blood-borne pathogens, particulate matter, and senescent erythrocytes from the blood (By similarity).

SUBDINIT: Hererodimer of an alpha and a beta subunit. Alpha-D associates with beta-2 (By similarity).

SUBCELLULAR LOCATION: Type I membrane protein (By similarity).

DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrins

Submitted (AUG-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Integrin alpha-D/beta-2 is a receptor for ICAM3 and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          with I-domains do not undergo protease cleavage.
SIMILARITY: Belongs to the integrin alpha chain family.
SIMILARITY: Contains 7 FG-GAP repeats.
SIMILARITY: Contains 1 WWFA domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         STRAIN=Sprague-Dawley;

In it is involved in a variety of immune phenomena including leukocyte-endothelial cell interaction, cytotoxic T-cell mediated killing, and antibody dependent killing by granulocytes and monocytes (By similarity).

SUBGELLULA: Heterodimer of an alpha and a beta subunit. Alpha-L associates with beta-2 (By similarity).

SUBCELLULAR ICCATION: Type I membrane protein (By similarity).

DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrins with I-domains do not undergo protease cleavage.

SIMILARITY: Belongs to the integrin alpha chain family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       05-JUL-2004 (Rel. 44, Created)
